

# INSTALLATION INSTRUCTIONS

The RTR and STR series heated towel rails are supplied with a moulded plug for 'soft wiring' AND a concealed fixing kit for 'hard wiring'. Please see drawings.

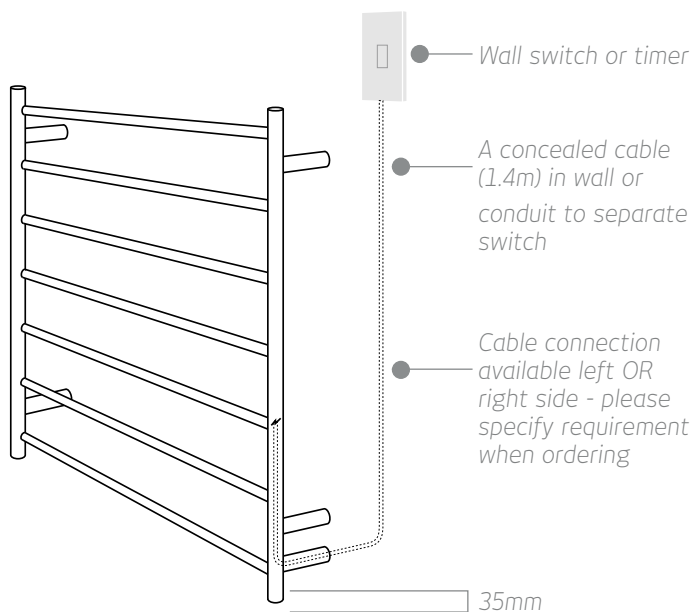

For concealed wiring, a provision needs to be made to connect the towel rail via a switch or timer switch as per the drawing. Depending on your preferred switch position the towel rail can be mounted upside down if required.

NOTE: Hard wired installation must be carried out by a licenced electrician. The Radiant Towel Rail range are manufactured in accordance with Australian Standards - SAA Certificate of Approval number V07911 and come with a 7 year replacement warranty.
